ANTI-BURGLARY ROLLER SHUTTERS SYSTEM

■ Secure House is a unique supplier who offers a complete supply and fit of an innovative system of research carried out in an accredited laboratory to PN-EN 1627:2011 has received class 3 burglary-resistance certification.

■ This has been achieved mainly through the innovative design solutions. The effective protection is ensured by reinforced channels, which do not allow for bending back and pulling off the roller shutter profiles, and by a special reinforcement in the endslat which ensures high rigidity and stability. In addition, the resistant structure of the curtain prevents any impact-induced damage to the roller shutter. In addition, the latch mechanism mounted in the bottom part of the roller shutter prevents raising of the roller shutter's curtain, which ensures an effective protection of the house.

■ The anti-burglary roller shutters are an ideal solution which connects a strong, durable and closed cover with an aesthetic design. Anti -burgalry construction can be used both in front-mounted and top-mounted roller shutters systems.

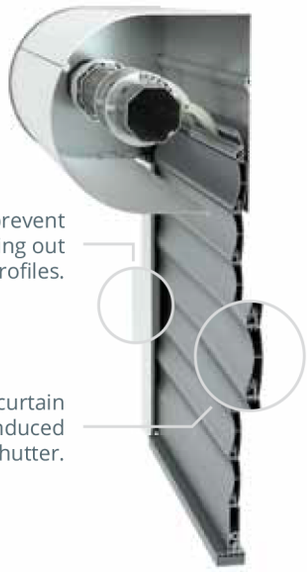

■ Possibility to adapt the system in already existing buildings but also in newly raised buildings as well as use the existing components which are already in offer.
