ABOUT US

Located in Luton, Bedfordshire, Secure House Ltd. is situated close to many of the leading manufacturers of Architectural Ironmongery in the UK.

Here at Secure House we are committed to supplying some of the best quality door hardware and ironmongery to customers all over the UK. We try to supply ironmongery for all tastes, from traditional to contemporary with as wide a range of finishes as possible.
We have one of the most comprehensive ranges of door furniture in the UK, with most items produced and finished by hand. So you can always be sure of the very high quality!

At Secure House, we believe that quality should never be a compromise. From using the finest materials to crafting our hardware by hand, we are committed to creating high-quality hardware that not only looks beautiful and flawless but also endures the rigors of time.

HOW BESPOKE IRONMONGERY IS MADE

Cut

A billet of brass is cut from bar stock of the correct diameter.

Forged

The knob's shape after the heated billet is pounded into the die.

Trimmed

A stamping press takes off the thin metal skirt leftover by the forge.

Ground

An abrasive grinding belt strips off forge oxidation.

Polished

Polishing wheels smooth away the girding marks.

*This concept is shown as an example and does not apply to full product range

COSMOS BLACK

Black doesn't only look good in your wardrobe! The new cosmos black finish has a matt black appearance. The finish is applied electrostatically as a powder coating. This procedure does not require the use of solvents creating an eco-friendly high-quality product. SECURE HOUSE door handles in "Cosmos Black" are scratch-proof as well as highly resistant to corrosion. Their powder coating has a unique and pleasant depth to it while the surface itself feels smooth and warm, not unlike that of a palm stone.

Within a very short time, our black assortment was met with great enthusiasm by numerous architects in the USA and Europe.

SECURE HOUSE DOOR HINGES

Secure House standard hinge

Our range of door hinges offers a variety of different styles and sizes, if you are looking for a door hinge that is sturdy, durable and reliable, then Secure House hinges will definitely fit the bill.

Our hinges come with bearings and they are tested 200,000 opened and closed.

HINGE CAPS

You can count on us for industry expertise and know-how - all our hinges are made in a variety of different finishes
to coordinate with any décor or style of door.

Standard finishes

Satin Brass

Stainless Steel

Powder Coated

Powder coated in any RAL colour

Plated

Plated in any special finish

SECURE HOUSE CONCEALED HINGE

Concealed hinges are perfect for doors where you do not want a hinge on display, as they hide away behind the doors and are invisible to the eye. Concealed hinges are also popular for use in kitchen cabinets. If you are searching for a discreet hinge that creates a smooth appearance to the outer side of furniture a concealed hinge will perfectly suit your job. Whether you need a concealed hinge for doors or for cabinets, we have them both.

Hidden hinge with a double rotation axe movement, manufactured in high-strength steel

The 180° opening allows to create wing doors with large internal strikes and use sealing gaskets even on the hinged side

Rotation movement on 2 axes with no linear displacement

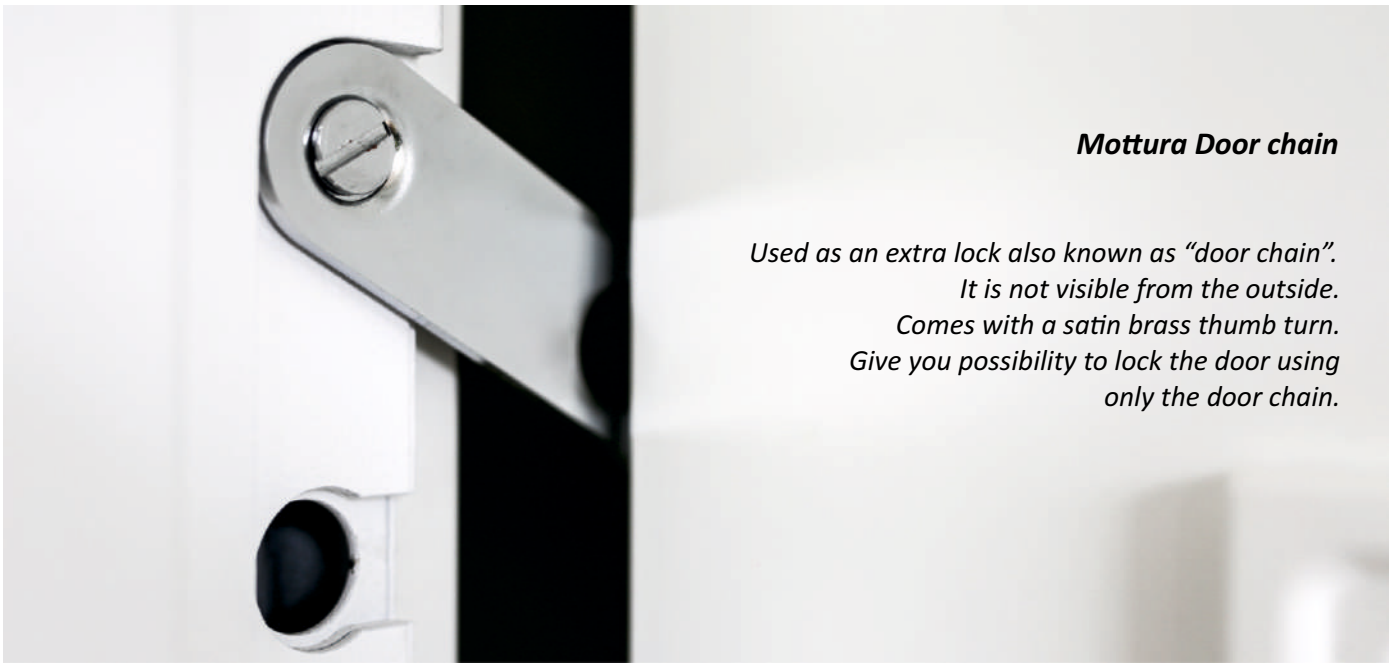

Sphere bearing rotation with no sliding and mechanical wear, with soft and fluid movement without friction

Silenced operation thanks to mobile techno polymer components

Simple and safe door installation thanks to the possibility of an easy insertion of the removable door into the hinge support housed in the door

Easy adjustment of the door position on the 3 axes with load distribution between the upper and lower hinges

DOOR CLOSERS

Mottura Door chain

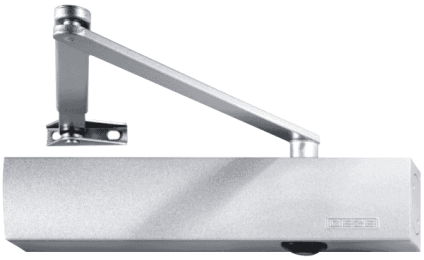

Used as an extra lock also known as "door chain".
It is not visible from the outside.
Comes with a satin brass thumb turn.
Give you possibility to lock the door using only the door chain.

Door closers are essential for fire safety, preventing doors banging, reducing energy bills and protecting your door.

At Secure House we offer a wide variety of door closers in different sizes, including door closers that are suitable for inward and outward doors, have closing and opening speed adjustment and top of the market concealed door closers.

Overhead door closer with guide rail

Overhead door closer with a link arm

SECURE HOUSE CONCEALED DOOR CLOSER

This door closer is designed for concealed installation in the door leaf and frame. Suitable for almost every type of door, it offers a wide variety of functions and flexibility combined

COMBINATION OF TWO LOCKS

We recommend you use two locks. A simple bolt with the handle latch is operated with a thumb turn from the inside and a key externally. A top lock (Mottura) bolts into the side, top and bottom of the door and gives security class 3 or 4 by EN 1627 standard depending on door type. You can easily secure your house while you're at home with a simple 90 degree thumb turn on the inside of the front door. When you're leaving your property you can use the second lock operated externally with a key to completely secure your front door.

MUL-T-LOCK CYLINDER

3 in 1 Cylinder Keying

Ho

After the initial installation, use the green key to operate the cylinder.
If a need to re-key the cylinder arises, simply insert and rotate the yellow key.
The green key will no longer be able to unlock the cylinder. If the need to re-key arises
a second time, simply insert and rotate the red key to once again change the combination, thereby disallowing unlocking by either the green or yellow keys. Once all changes have been used, an authorized Mul-T-Lock dealer can re-prep the cylinder for 3in1 keying once again.

Simple. Convenient. Flexible.

Mul-T-Lock's 3in1 keying option allows for the instant re-keying of mechanical lock cylinders without the need for any special tools or services. No removal or disassembly of the cylinder is required. Simply insert and turn a key to permanently change the cylinder to a new combination and nullify the previous key up to two times.

ELECTRONIC LOCKS

The Secure House range of electronic locks enables you to control your front door with key tag, keypad and even your mobile phone. Smart door locks are designed to lock and unlock a door when receiving instructions from an authorised device using wireless technology or using a keypad. With the added convenience of not having a physical key, the smart lock on your door can be unlocked via a smartphone, key tag or keypad. You can monitor who enters of leaves your home and also send virtual keys to loved ones or guests and visitors.

The Multiblindo eMotion electromechanical automatic multipoint lock is the perfect combination of security and comfort. When the door is closed, it locks automatically, ensuring peace of mind and safety, while the electromechanical opening provides access control and remote opening. **Multiblindo eMotion** is designed to be installed on high-security metal doors and have a wide array of uses, for example the protection of the entrance and exit doors of homes, shops, companies, banks, laboratories, shopping centres, health buildings, etc. The security system is completed by a wide range of European profile cylinders that meet the strictest security standards.

KEY POINTS

- **Deadbolt with patented anti-lockpicking system**
  In case of an attempted breaking-through, the exerted force will:
  - move the rotation fulcrum upwards
  - block the deadbolt halfway between the door and the frame, irreversibly blocking the door.

x1R Smart is a motorised electronic lock purposely designed for use on armoured doors. The opening and closing functions are controlled by a motor and an electronic card with a state-of-the-art microprocessor. Even in the event of a power failure, the door can still be opened using the mechanical key which, thanks to a security system, can disconnect the motor during the activation of the mechanical cylinder

Open
as you like

You can open x1R Smart with several electronic credentials, setting functions, time control and even time schedules. However, in case of need, you always have the possibility to open with a mechanical key.

SMARTPHONE
Thanks to the Bluetooth Smart technology, you can open the door with your smartphone. The free Argo App enables any Bluetooth Smart Ready phone (iOS, Android) to unlock the door equipped with x1R Smart. The Bluetooth Smart technology allows remote unlocking of the door up to a distance of 10 meters. So you can use your phone also as remote control to unlock your door.

APPLE WATCH
Argo App is available also for Apple Watch Series 3 and Series 4, which you can use to unlock your x1R Smart.

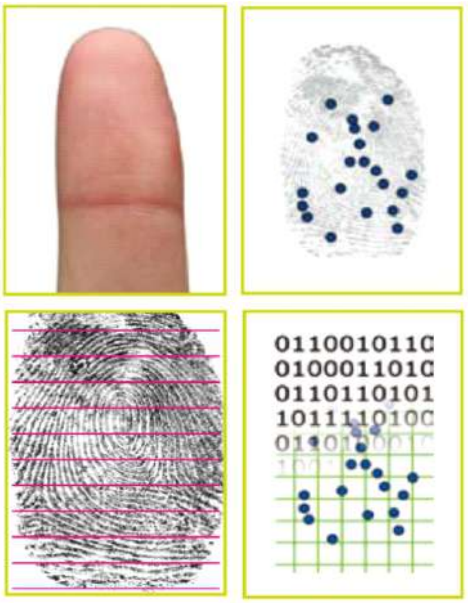

FINGERPRINT
x1R Smart is integrating fingerprint biometric authentication. The biometric template is a very secure and convenient authentication credential: it can't be borrowed, stolen, or forgotten, and forging one is practically impossible.

EKEY - EUROPE'S NO. 1 IN FINGERPRINT ACCESS SOLUTIONS

Maximum security

Only authorized persons can unlock the door. The recognition on the finger is unique. And 1000 times more secure than the 4-digit code on a bank card.

Made in Austria

Over 1 million satisfied customers use ekey fingerprints. A quality product from the European market leader. Developed and manufactured in Austria.

New comfort feeling

Simply open your doors with your finger. Without tools that can be lost or forgotten. Welcome to the Smart Home!

10 goods reasons

to choose ekey finger scanners

1. Security at home
Your front door is always locked

2. Unique convenience
No more huge key chains, forgotten passwords or cards

3. Everyday convenience
Have your key always "at hand"- your finger (key) opens the front door, the garage door, the garden gate, etc.

4. Upmost security
** You cannot lose/forget your keys,or lock yourself out anymore*
** No key can be abstracted anymore*
** Cannot be manipulated or bypassed*
** Each finger is unique*

5. User-friendly
The user saves the rights himself (with or without pc)

6. Easy mounting
Also for retrofitting

7. Full outdoor capability
From -45°C to + 85°C

8. Compatibility
With any electric strike, motor lock, or electric multi point locking system

9. Wide field of application
Doors, gates, alarm systems, safes, (weapon) cabinets, vehicles, PCs, etc.

10. Quality by the market leader
**eKey guarantee up to 4 million scans*

MAINTENANCE

AGED FINISHES

We have added 5 new finishes to our already extensive product range.

MATT Bronze

Polished Brass which is not lacquered will naturally darken with time, however with our MATT Bronze finish we have aged the brass, and applied a clear lacquer.

Over a period of time the bronze colour will lighten along any edges and surfaces that are frequently touched and create a naturally aged appearance highlighting frequently touched areas and exposing the brass below.

As the finish will change over time, there is no warranty on this finish.

Antique Brass

With this finish we polish the brass and apply a bronze patina over the total surface.

Using soft brushes our experienced polishers remove some of the bronze patina to expose the brass below thus highlighting the variance of shades making each piece both appealing and unique.

To preserve the final appearance, we apply a protective coating of clear electrophoretic lacquer.

Polished Nickel, a Living Finish

Our Polished Nickel finish is nickel plating on highly polished brass.

The nickel finish is not coated and will therefore oxidise naturally.

If not regularly buffed with a soft cloth the nickel plate will subtlety change over time by taking on an aged patina.

Solid Bronze Rustic, a Living Finish

These striking products are made using molten Bronze flowing into cavities within a sand mould. This casting process leaves light surface indentations to bestow a rustic appearance, which contrasts in texture to other smoothly finished products. A light bronze patina is applied by hand on the cast bronze creating a country-style appearance.

When leaving the factory these products are coated with paste wax. This acts as a barrier to prevent oxygen from immediately oxidizing the bronze surface. Over time, this layer is worn away allowing water and oxygen to then oxidise the surface.

Over a period of time the bronze patina will lighten along any edges and surfaces that are frequently touched, creating a naturally aged appearance as the bronze below is exposed. When untouched the finish may darken as the bronze oxidises.

As this is a living finish, products will not be identical, there will be slight variation in hue and tone.

Avoid exposure to abrasives or chemicals as these will mar the surface finish.

It is good practice to occasionally wax the surface using Carnauba wax.

As the finish will change over time, there is no warranty on this finish.

Black Iron Rustic

Our Black Rustic range is produced with molten iron flowing into cavities in a sand mould and made malleable by a process known as annealing. The surface of this product will reveal slight indentations created as the metal cools while the shape is being formed to bestow an aged look.

After casting we treat the iron with a process called Phosphating, which slows the rusting process, and coat the product with a powder coated black finish.

Any Iron product is prone to rusting, please read our maintenance recommendations.

PRODUCT CARE

Maintaining the quality of the finish requires occasional care by removing dust and stains from the surfaces.

Lacquered Finishes

Comprising Polished Brass, Satin Nickel, Antique Brass, Matt Bronze, Satin Brass, Jupiter, Mercury and Mayfair.

All lacquered finishes will eventually break down over time. Lacquer breakdown will occur more frequently on products exposed to the climate, particularly in coastal areas and in polluted environments.

Regularly removing dirt and watermarks with a non-abrasive cloth will help maintain the life of this finish.

For products used externally applying a non-abrasive light wax coating will protect the lacquer and could extend its life. DO NOT USE metal cleaners or aerosol sprays as these will damage the lacquer.

External fittings will also benefit from a periodic light oiling of springs and moving parts

The life of the lacquer is beyond the manufacturer's control, and therfore cannot be guaranteed.

Polished Chrome, Satin Chrome, Apollo and PVD Finishes

Regularly removing dirt and watermarks with a nonabrasive cloth will help maintain the life of these finishes.

External fittings will also benefit from a periodic light oiling of springs and moving parts

Black Iron Door Furniture

Regularly removing dirt and watermarks with a non-abrasive cloth will help maintain the life of this finish.

Exposure to humidity will cause the product to rust so all external fittings will benefit from an occasional wiping over with a lightly oiled cloth and a periodic light oiling of springs and moving parts.

If the decorative material shows signs of 'Chipping 'remove any flaking or loose paint, making sure the surface is dry and grease free, then spot the affected area with enamel paint e.g. 'Humbrol' or similar.
